FUTURE SCOPE

# WHAT IS THE PROBLEM?

Applicant Tracking Systems (ATS) are widely used by companies to streamline the recruitment process and efficiently manage a large number of job applications.

Applicants may experience increased competition, the need for keyword optimization, and potential frustration due to the automated and less transparent nature of ATS in the recruitment process.

# EXISTING WORK

- Free and premium ATS-friendly resume makers assist job seekers in creating resumes optimized for Applicant Tracking Systems. Premium options often offer advanced features and additional templates for a more personalized approach.

- Currently, there's a lack of dedicated resume analyzers specifically tailored to help students create more ATS-friendly resumes, impacting their ability to optimize applications for automated recruitment systems.

# OUR SOLUTION

- Smart Vision revolutionizes job applications, utilizing cutting-edge Natural Language Processing to critically analyze existing resumes and provide personalized improvement suggestions, enhancing career prospects.
- Smart Vision goes beyond traditional resume tools, featuring a technology showcase in portfolios for heightened visibility. Its vision includes tailored advice for specific job descriptions, empowering professional success.

# OUR FEATURES

01

## COURSE RECOMMENDATIONS

Assists you in  
identifying courses that  
can strengthen your
